

Project Initialization and Planning Phase

Date	02 July 2026
Team ID	SWTID-2026-9794
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

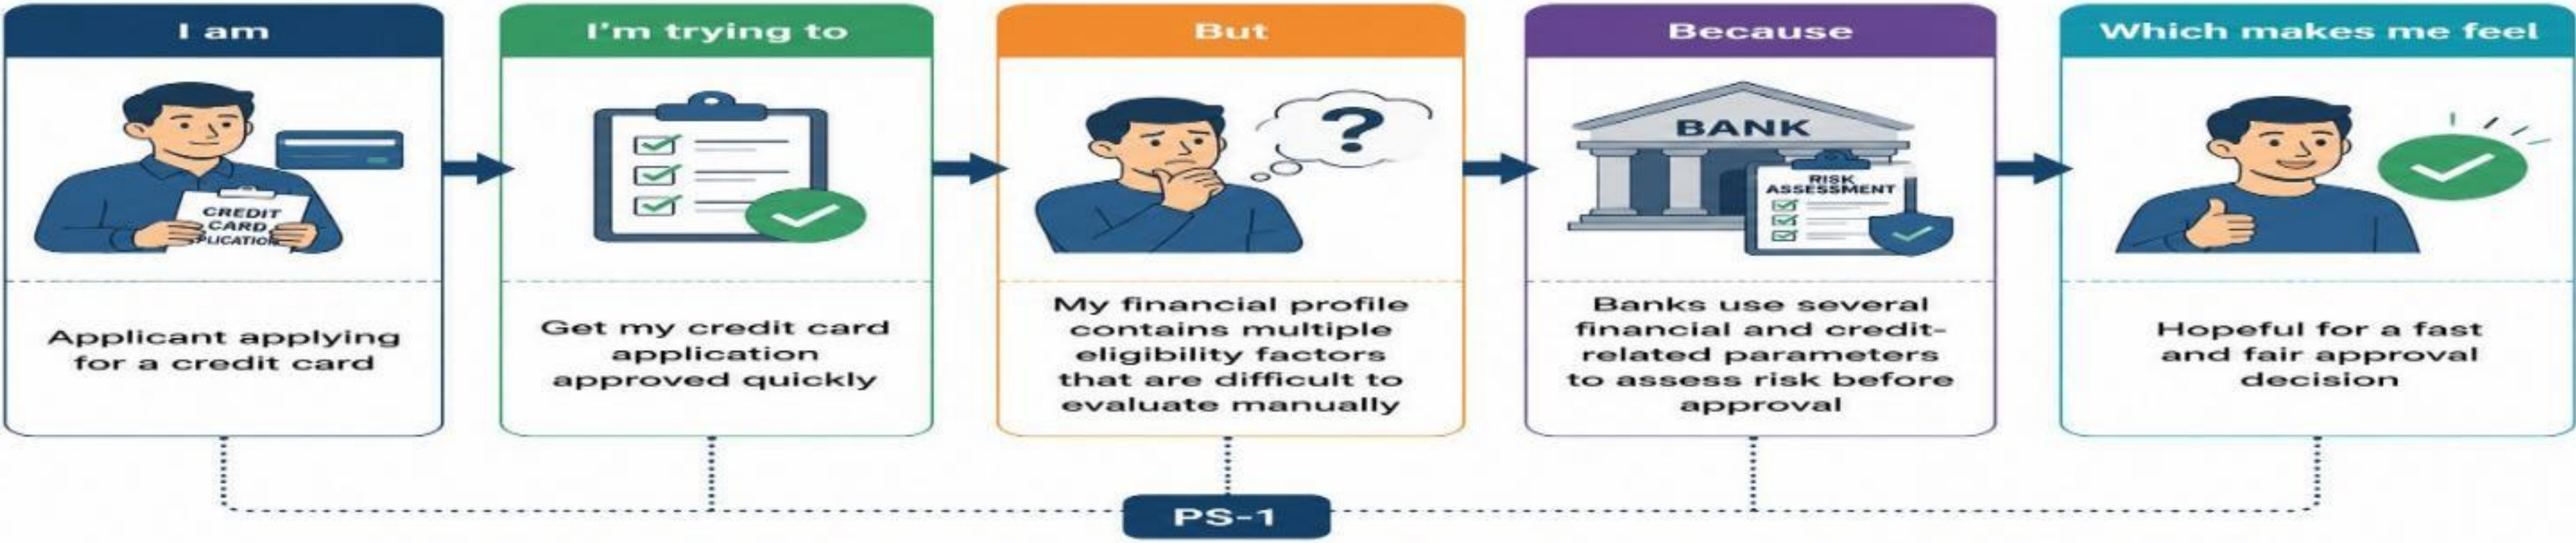

Define Problem Statements (Customer Problem Statement Template):

A Credit Card Approval Prediction System helps financial institutions automatically evaluate credit card applications based on customer details such as income, employment status, credit score, loan history, age, and financial behavior. This reduces manual effort, improves accuracy, minimizes fraudulent approvals, and speeds up the decision-making process while providing a better customer experience..

Example:

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Obtain quick and accurate approval for my credit card application.	My eligibility depends on multiple financial and personal factors that are difficult to assess manually.	Banks evaluate income, employment status, education, financial background, and other applicant details before approving applications.	Confident that an intelligent Machine Learning system can provide faster, fair, and more accurate approval decisions.

Example - Problem Statement (PS-1)

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card.	Obtain quick and accurate approval for my credit card application.	My eligibility depends on multiple financial and personal factors that are difficult to assess manually.	Banks evaluate income, employment status, education, financial background, and other applicant details before approving applications.	Confident that an intelligent Machine Learning system can provide faster, fair, and more accurate approval decisions.
